## Application of E-Government model of Yogyakarta city, Indonesia in Tra Vinh city of Viet Nam

02/10/2011 12:41

After more than 25 years of renovation, Vietnam's economy has flourished and achieved many significant achievements, including the application of information technology in administration, production and trading has become increasingly popular and plays an important role. The application of information technology with the administrative reform in the state agency has received special attention of the authorities.

The application of information technology can generate tremendous amounts of information, often stored, published, providing for both online social generate broad-based approach of the people; changes and responsibilities of public authorities, creating openness and transparency for the public administration. In addition, information technology can make big change in the exchange of information (report, statistics, post consultation, evaluation, sharing information etc ...) via electronic mail instead of by mail, by fax, organizing meetings, conferences, seminars and online settlement of citizens, businesses, etc. online ... online. The construction of E-Government will be part of a strategy for administrative reform in Vietnam, aims to improve the performance of the Government and governments at all levels, help people and businesses to work faster quickly, convenient, economical and effective.

To implement effectively, the city has focused on the mission: To strengthen the editorial board, work regulations and operation of the electronic website of the city; upgrade the server, traffic , scanner, software, storage devices; new level, account update for all staff, public servants and

employees of the city departments and communes, wards, train and update basic knowledge IT for officials and public servants, city, new staff, staff rotation, mobilize annual work.

Besides, the city has organized several study tours E-Government model in Indonesia, meetings and seminars with expert's project and open training courses and workshops between the project steering committee, senior advisors, city departments and organizations on the importance of implementing E-Government project and participation community for the project.

To help people understand the purpose and significance, the importance of implementation models for E-Government applications in the city Yogyakarta, Indonesia in Tra Vinh city, the city has direct network connection current network information providers on the city network, such as Tra Vinh Telecommunications (VNPT), Vinaphone, MobiFone, Viettel, Sfone, EVNTelecom ... with nearly 65 Internet access points and 4,730 households have a computer account for 20.80% of which 2,956 connected to the network and 13,689 people that use the Internet accounts for 15% of the population which created favorable conditions for the implementation of the scheme to be effective in the coming time.
